

The Smart Plug+ is part of the MiHome home automation range. The Smart Plug+ links to the MiHome Gateway which provides the communications between your MiHome device and the internet.

The MiHome Smart Plug+ combines the functions of the monitor and the control products. The device allows you to monitor the amount of electricity being used by the appliance plugged in to the socket. The App also shows this data over time and as a cost by using your electricity tariff. The MiHome Smart Plug+ also allows you to use all the control features in the MiHome App.

It is essentially a combination of both the MiHome Smart Plug and the MiHome Monitor.

## SMART PLUG+

TECHNICAL INFORMATION	KEY BENEFITS
<ul style="list-style-type: none"> <li>- Model: MIHO005</li> <li>- Maximum load: 3000W</li> <li>- Voltage range: 230-250V 50Hz ac</li> <li>- Transmission Frequency: 434.300 MHz</li> <li>- Maximum current: 13A</li> </ul>	<ul style="list-style-type: none"> <li>- Monitor the energy usage of your home appliances</li> <li>- Save money on your energy and electricity costs</li> <li>- Remotely control your appliances connected to the device</li> <li>- Set triggers and geofencing to customise the range</li> <li>- Control with the Amazon Echo and link to IFTTT</li> </ul>

The MiHome Smart Plug+ is a Control and Monitor device, meaning that it can both receive and send information to and from the MiHome Gateway.

There may be some interference between the Smart Plugs+ placed into adjacent wall sockets, which may affect range or operation. We recommend you place them at least 1m apart.

The MiHome Smart Plugs+ require no installation whatsoever. They are simply plug and play! Plug into a free mains wall socket then plug in a typical household device into the Smart Plug+.

### FAQs

Can devices be controlled with this adaptor?

Yes, the adaptor can be used to control and monitor connected devices and appliances

What are the power and current ratings?

The adaptor can be used with devices or appliances up to 3kW or 13A
