

Questions & Answers

Disclaimer: Any work done on Mains wiring should be done by a competent person such as a qualified electrician

Q. Can I retrofit a MIHO007 into my current double wall socket unit?

Yes. Pay attention to the wiring terminals to ensure it fits.

Q. What kind of back box would I need to fit the MIHO007?

We recommend 35mm deep back box. Pay attention to the cable entry points of the unit.

Q. My Second socket (could be left or right) has paired to the same channel as the first. How do I clear the memory? (This will only apply to customers that use the ENER002 or MIHO003 hand controller)

In this example let's say the left socket is paired to channel 1. The second socket gets paired to channel 1 also. there isn't a memory clearing function. You will need to pair the First socket to another channel. For example instead of using channel 1 and 2. You will need to use channel 2 and 3.
